Perfect! I've successfully scraped all four pricing pages:

1. **CloudRift** - https://www.cloudrift.ai/inference
2. **DeepInfra** - https://deepinfra.com/pricing
3. **Fireworks** - https://fireworks.ai/pricing#serverless-pricing
4. **Groq** - https://groq.com/pricing

The content from these pages has been stored and is now available for analysis. You can ask me questions about pricing for
    specific models from any of these providers, and I'll extract the relevant information for you.

Based on the data I have, I can now compare the costs for DeepSeek V3 between Cloudrift AI and DeepInfra:

## Cost Comparison: DeepSeek v3

Unfortunately, **neither provider lists the exact "DeepSeek v3" model** in their current pricing. However, both offer DeepSeek
    models from the v3 family:

### **Cloudrift AI**
- Only offers **DeepSeek-V4-Flash-0731** (not v3)
  - **Input**: $0.14 per 1M tokens
  - **Output**: $0.28 per 1M tokens
  - Context: 1.05M tokens

### **DeepInfra**
Offers several DeepSeek models, closest to "v3":

**DeepSeek-V3** (exact match):
- **Input**: $0.32 per 1M tokens
- **Output**: $0.89 per 1M tokens
- Context: 160k tokens

**DeepSeek-V3.1**:
- **Input**: $0.25 per 1M tokens (or $0.13 cached)
- **Output**: $0.95 per 1M tokens
- Context: 160k tokens

**DeepSeek-V3.2**:
- **Input**: $0.26 per 1M tokens (or $0.13 cached)
- **Output**: $0.38 per 1M tokens
- Context: 160k tokens

### Summary

**DeepInfra has DeepSeek-V3** at $0.32 input / $0.89 output per 1M tokens. Cloudrift AI does not currently list DeepSeek v3, only
    the newer v4 variant which is significantly cheaper but is a different model generation.

If you need the actual DeepSeek V3 model, **DeepInfra** is your option from these two providers.
